

**PIKE**

# DON'T CALL IT A COMEBACK

Introducing the all-new RockShox PIKE

A comeback has never been so amazing. After taking a few years off, PIKE comes back in the RockShox lineup, as the ultimate trail fork. Your trail could be a silky smooth ribbon of singletrack, or a rock-infested goat trail in the Alps. Either way, there is a PIKE for you. All wheel sizes, with 26", 27.5" and 29" options, and 160mm and 150mm travel models, plus a 140mm version for the 29" platform. The RCT3 damper is available in either Dual Position Air or a Solo Air version to complete the offering.

### THE BEST OF ALL WORLDS

PIKE is as stiff as a Lyrik, thanks to its 35mm stanchions and chassis, but at a trail fork weight. How so? The lower legs are asymmetrical, to maximize stiffness and precision on the braking side and save precious grams on the damper side. The 160mm 26" version clocks in at a svelte 1,837 grams (4.05 pounds).

### FASTER AND MORE SECURE

The all new 15mm Maxle Lite featured on PIKE requires no tools to adjust the lever position or secure the wheel, and provides an even more solid and reliable interface between the fork and wheel.

### CHARGER DAMPER

Simply put, the all-new Charger damper we developed for PIKE is the most refined damper RockShox has ever produced. It's a bladder-charged damper, which means it has consistent performance even during the longest, hardest descents, plus it allows complete control for the trail with open, pedal and lock positions (RCT3 version). A Rapid Recovery rebound circuit completes what many testers have described as the "best RockShox fork ever made."

### AFTERMARKET PRODUCT INFORMATION

MODEL	WHEEL SIZE	WEIGHT*	TRAVEL	STEERER	AXLE	ADJUSTMENTS	SPRING	MAXIMUM ROTOR SIZE	COLORS	MSRP USA	MSRP EU	AVAILABLE
RCT3	26"	1835g	150mm, 160mm	Tapered Aluminum	Maxle Lite 15mm	External rebound, low speed compression, 3-position compression (Open/Pedal/Lock)	Dual Position Air, Solo Air	200mm	Black, White	\$980-1085	878-949€	May 2013
