

REVERB

MORE OPTIONS FOR ALL MOUNTAIN BIKERS

RockShox Reverb has quickly become the synonym for the best adjustable seatpost on the market, thanks to its unique features, such as the hydraulic remote control and the amount of options that make it ideal for all riders.

Today RockShox expands the array of options by adding a 150mm travel version for Reverb Stealth, a 34.9mm diameter option for all models and the new Connectamajig quick-release hydraulic hose option on Reverb Stealth.

TRAVEL AND DIAMETER OPTIONS

Reverb is now available in 100, 125 and 150mm travel options (150mm for Reverb Stealth only), ensuring each rider can find the appropriate version to better suit each one's frame size and configuration, in addition to riding style and personal preferences.

With the addition of the 34.9mm diameter version for both Reverb and Reverb Stealth, and the already available 30.9 and 31.6mm diameters, Reverb is designed to fit the vast majority of the existing mountain bike frames on the market.

STEALTHY AND QUICK

The cleanest house routing for an adjustable seat post meet easy installing and maintenance: Reverb Stealth is now available with the Connectamajig hydraulic quick-release for the remote control hose. Connectamajig makes it a breeze to route the hose into the frame when assembling the seatpost on a bike, and allows for several disconnects and reconnects before a system bleed is required.
